

Appl. No. 09/912711
Arndt. dated Jan. 12, 2004
Reply to Office Action of July 10, 2003

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-27 (Canceled).

28. (New) A disk storage media, comprising an information storage portion for storing information and an electronic circuit portion for processing the information,
the information storage portion storing a plurality of information to be used in an external system having a system control portion,

B |
the electronic circuit portion including discrimination means for discriminating an operation condition of the external system, selecting means for selecting information matched with the operation condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected information stored in the information storage portion so as to allow the use of the external system:

29. (New) A disk storage media comprising an information storage portion for storing information and an electronic circuit portion for processing the information,
the information storage portion storing a plurality of information to be used in an external system having a system control portion,

the electronic circuit portion including selecting means for discriminating an operation condition of the external system based on the information supplied from the external system and selecting information matched with the operation condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected information stored in the information storage portion so as to allow the use of the external system.

30. (New) A storage media according to claim 28 wherein the external system is a computer system and the information stored in the information storage portion is a system program which is to be executed in the system control portion.

31. (New) A storage media according to claim 28, wherein the information to be matched is an emulator of a system program.

32. (New) A storage media according to claim 28, wherein the information stored in the information storage portion includes system parameters necessary to drive the external system, and the electronic circuit portion includes a setting portion for setting the selected system parameters to the external system.

33. (New) A storage media according to claim 28, wherein the external system is a computer system having a printer and the information stored in the information storage portion is a parameter for adjusting a printer condition.

34. (New) A storage media according to claim 28, wherein the disk storage media is an optical disk.

35. (New) A computer system comprising a disk storage media having an information storage portion for storing information, an electronic circuit portion for processing an information and a computer capable of connecting the storage media,

the electronic circuit portion including discriminating means for discriminating an operation condition of the external system, selecting means for selecting information matched with the operation condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected information stored in the information storage portion so as to allow the use of the external system for starting up the system program of the computer.

36. (New) A computer system including a disk storage media having an information storage portion for storing information, an electronic circuit portion for processing information and a computer capable of connecting the storage media,

the computer system further including a printer,

the information storage portion storing printing condition,

the electronic circuit portion including discriminating means for discriminating a print condition of the printer, selecting means for selecting a printing condition matched with the

discriminated condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected printing condition stored in the information storage portion,

the computer reading the printing condition for adjusting a printing environment from the information storage media for executing a printing suitable for the printing environment.

37. (New) A computer system according to claim 35, wherein the storage media is an optical disk.

b1
38. (New) A storage media according to claim 29, wherein the information stored in the information storage portion includes system parameters necessary to drive the external system, and the electronic circuit portion includes a setting portion for setting the selected system parameters to the external system.

39. (New) A storage media according to claim 29, wherein the external system is a computer system having a printer and the information stored in the information storage portion is a parameter for adjusting a print condition.

40. (New) A storage media according to claim 36, wherein the disk storage media is an optical disk.
